

Ship the Ugly One: Live MVP Deployment & User Audit

Track:	General AI Fluency	Phase:	Build
Type:	Assignment Deliverable	When:	Week 5 (4h Workload)

1. LIVE PUBLIC URL & SITEMAP REACHABILITY

Primary Live HTTPS URL: <https://raunitsingh.netlify.app>

Secondary GitHub Pages URL: <https://singhraunit2807.github.io/Cybersecurity-Portfolio-Website/>

Status: 100% public, loading securely over HTTPS on mobile and desktop without 404 dead ends.

2. SITEMAP ROUTE VERIFICATION (AUTHENTIC CONTENT)

Route Integration Overview: Every planned section from the Week 3 sitemap is live with real data, diagrams, and case narratives instead of placeholder text:

- **Hero & Proof Header:** Displays the core positioning claim and quick contact actions.
- **Case Study 1 (Voice Scheduling Assistant - Aria):** Full 3-beat breakdown (Problem, Solution, Measured Impact).
- **Case Study 2 (eBPF Kernel Runtime Defense - eBPF-AIMES):** Technical architecture narrative and security metrics.
- **Skills & Tooling Grid:** Actual frameworks and security toolsets without fluff.
- **Direct CTAs:** Direct downloadable CV, GitHub repo link, and 15-minute booking integration.

3. REAL USER FEEDBACK AUDIT (ONE REAL PERSON TEST)

Reviewer Profile: Senior Engineering Peer / Technical Collaborator.

What They Saw & Understood: The reviewer immediately understood my technical focus (Systems & AI Security) within 15 seconds. The case studies communicated genuine engineering problem-solving rather than generic claims.

Points of Confusion Noted: The navigation back to the top of the page on mobile was slightly awkward, and the contrast between the secondary button text and background needed more pop under direct sunlight.

4. HONEST "STILL UGLY" LIST (ROUGH EDGES IDENTIFIED)

Known Rough Edges to Refine in Next Polish Pass:

1. **Mobile Spacing & Padding:** Case study text blocks on smaller mobile viewports have tight side margins, requiring extra vertical scroll effort.
2. **Button Contrast:** The secondary "View Code" button blends slightly into the light gray card background on low-brightness monitors.
3. **Image Loading State:** Architecture SVG diagrams pop into view abruptly without a smooth skeleton loading placeholder.
4. **Footer Spacing:** Social links and copyright text sit too close to the bottom screen edge on mobile displays.

5. NO-MYSTERY CODEBASE STATEMENT

Zero Mystery Code: The entire site uses hand-reviewed HTML5, clean CSS Grid/Flexbox, and lightweight JavaScript. Every script and style rule was verified step-by-step with AI as a tutoring partner. There are no opaque third-party scripts, unverified analytics trackers, or unexplainable code blocks across the build.

6. RUBRIC & PASS CRITERIA VERIFICATION

Evaluation Criteria	Status	Verification Evidence
Portfolio live & every page reachable	✓ PASS	Live HTTPS URL verified on Netlify edge and GitHub Pages.
Real work, cases, and images included	✓ PASS	Contains full case studies (Aria & eBPF-AIMES) and authentic visuals.
Real person opened it & reaction captured	✓ PASS	Documented first impressions and friction notes from peer review.
No unexplained mystery code	✓ PASS	Verified 100% semantic HTML/CSS codebase with zero bloated plugins.
Honest "still ugly" list present	✓ PASS	Identified 4 concrete visual and mobile layout friction points.
