

Frame It as Cases: Work That Speaks for Itself

Track:	General AI Fluency	Phase:	Foundations (Week 2)
Type:	Assignment Deliverable	Workload:	3 Hours

1. Voice Card & Claude Standing Instruction

VOICE CARD (6 WORDS): "Direct, warm, plain, clear, no buzzwords"

Standing Instruction for Claude Project:

Write in this voice: "Direct, warm, plain, clear, no buzzwords." Use direct active sentences and plain English. Avoid corporate jargon, exaggerated praise, and filler transitions. Keep every explanation focused on the actual problem, the decision made, and the measurable outcome. Never use Em dashes.

2. Before & After: Humanizing AI Copy

GENERIC AI LINE (BEFORE)

"Leveraged a cutting-edge, human-centric design strategy to strategically overhaul the user onboarding funnel, driving synergy and delivering a results-driven digital experience."

EDITED PLAIN ENGLISH VERSION (AFTER)

"I simplified our 3-step signup form and rewrote the welcome email. Fewer people dropped off halfway, and new users reached their active dashboard in under two minutes."

3. Framed Case Studies (Three-Beat Structure)

Case Study 1: Voice-Driven Intelligent Assistant Routing

The Problem: Complex appointment tools required users to click through multiple nested forms, causing a 35% drop-off during peak mobile usage.

What You Did: I built a speech-enabled scheduling pipeline using custom intent recognition that parses natural spoken phrases directly into structured calendar events.

What Came of It: Booking time dropped from over 2 minutes to under 20 seconds, handling natural speech inputs with zero manual form clicks.

Case Study 2: Internal Lead Ingestion Pipeline

The Problem: Manual copying of lead information from raw emails into spreadsheets took nearly two hours each morning and created repeated missing-field errors.

What You Did: I wrote an automated Python script that monitors incoming emails, extracts required parameters, verifies data schema integrity, and posts directly to the central database.

What Came of It: Manual data entry was eliminated completely, routine processing time fell under 60 seconds, and missing data errors dropped to zero.

Case Study 3: Help Center Search & Discovery Optimization

The Problem: Basic support tickets (like password resets) accounted for 40% of the support queue because the documentation search returned irrelevant or empty results.

What You Did: I re-indexed the top 20 help documents using plain everyday keywords and added prominent direct links to top issues on the main portal page.

What Came of It: Repeat tickets dropped by 25% within four weeks, and users resolved standard issues independently without waiting for an agent.

4. Bio & Direct Action Call-to-Action (For Sitemap)

Short About / Bio:

I build practical digital tools and solve system bottlenecks by writing clean, maintainable software. My focus is on understanding what is broken, making practical architectural decisions, and delivering software that saves real time.

Direct Action (Contact CTA):

Looking for a developer to build clean automation tools or discuss a technical role? Send a message through the contact form or schedule a short technical conversation to see the live demos.
