

The Through-Line: Map Content & CTAs (Week 3)

Track:	General AI Fluency	Phase:	Foundations
Type:	Assignment Deliverable	Workload:	2 Hours

1. The One-Line Claim (Brainstormed & Selected)

10 options generated with AI thinking partner, narrowed down to one sharp, memorable sentence:

"I build end-to-end AI applications and automated pipelines that eliminate manual operational friction and drive product efficiency."

- 1. I design AI workflow automation tools that cut operational effort by more than half.
- 2. I bridge the gap between user needs and business goals using practical AI integrations.
- 3. I build and launch practical AI solutions that fix real business bottlenecks.
- 4. I turn messy, manual processes into simple, automated AI systems that scale.
- 5. I show how applied AI directly improves search relevance and workflow speed.
- 6. I help teams scale through modern AI tools, automated pipelines, and smart search systems.
- 7. I build end-to-end AI setups that turn complex processes into clean user workflows.
- 8. I engineer practical AI solutions that clear out operational friction and improve reliability.
- 9. I prove that real-world AI implementation yields measurable results without unnecessary complexity.
- 10. I solve operational headaches by integrating practical AI tools directly into existing applications.

2. Content Map: Ordered Sections & Laddered CTAs

Every page lists sections in strict order, leads with the strongest proof, and ladders directly up to the Week 1 core action:

Page & Target Role	Ordered Section Breakdown	Page Call to Action (CTA)
Main Portfolio (Homepage) Primary Landing Funnel	1. Hero (One-line claim + value intro) 2. Featured Case Studies (Lead: Voice Assistant) 3. Technical Toolkit (CS fundamentals & AI stack) 4. About & Operating Principles 5. Direct Calendar Scheduling Portal	"Schedule a Technical Chat"
Case Study 1 (Lead Project) Voice-Driven Automation	1. Problem: Complex multi-step form drop-offs 2. Architecture: Speech-to-text + NLP intent routing 3. Execution: Direct calendar API integration 4. Outcome: Booking time cut from 2m to 20s	"Discuss This Architecture"

Page & Target Role	Ordered Section Breakdown	Page Call to Action (CTA)
Case Study 2 Lead Ingestion Pipeline	1. Problem: 2h daily manual data entry & errors 2. System: Automated Python parser + CRM webhook 3. Validation: Data sanitation & error handling 4. Outcome: Zero manual entry, 60s execution	"Explore Automation Setup"
Case Study 3 Documentation Search	1. Problem: High support queue due to poor search 2. Solution: Plain-English re-indexing & fast links 3. Metrics: 25% drop in basic support tickets 4. Key Takeaways: Taxonomy and query handling	"View Search Architecture"
Contact & Scheduling The Single Core Action	1. Direct 15-minute scheduling widget (Calendly) 2. Short direct message form 3. Direct links: GitHub, LinkedIn, Email, Timezone	"Book a 15-Min Intro Call" (Laddered Core Action)

3. "Still Need to Gather" Asset List

Honest list of specific assets, proof points, and artifacts required prior to build week:

Voice Assistant Project

- Short GIF/screen recording of voice command handling live calendar booking.
- Cleaned GitHub repo link with sanitized config files.

Documentation Search Project

- Before-and-after query relevance comparison table.
- Figma screenshot of the optimized help center layout.

Lead Ingestion Pipeline

- Architecture flowchart showing email parser to CRM database flow.
- Verified execution logs and time-saved metrics.

General Portfolio Assets

- Natural light professional headshot photo.
- Active Calendly booking embed link and working contact form endpoint.
